# Construction Related Mercury Work

- **Contact EH&S IH (and your RCT for RMA & RWP work) before working on sink traps, fume hood cup sinks, sewer/drain lines downstream of traps (including main branch lines in underground hallways), or vacuum lines as they may contain mercury.**
- **Mercury from historical spills may be found under floor tiles, at the base and behind cabinets, in drawers, etc.**
- **EH&S will establish controls prior to performing work.**
- **Do not leave an area if you suspect you have walked on a floor containing mercury beads. Call x6999 for assistance.**

For additional information, contact Rob Connelly, EH&S Division, (x4028)
